

# Octave<sup>®</sup> Clinical Insights Program

For people living with multiple sclerosis (MS)

Every person living with multiple sclerosis is unique and deserving of outstanding care, yet there are limited tools and resources available to provide daily support. Your doctor understands that life happens outside of the clinic and a lot can happen between regularly scheduled office visits. Octave's Clinical Insights Program partners with your doctor to provide expert care to help meet your needs.

This program's ongoing clinical support is an extension of your doctor's office that creates opportunities for early intervention and enables you and your doctor to personalize your MS care plan. You can now take charge of your MS.

# Frequently Asked Questions

## What is Octave's Clinical Insights Program?

Octave's Clinical Insights Program takes a human + technology approach to provide you with continuous clinical support outside of your doctor's visits.

## What is the technology approach?

Octave's Clinical Insights Program is supported by an easy-to-use mobile application designed to help you manage your MS. The application captures important details of your health journey and connects you with a dedicated nurse care partner (NCP) to help manage your MS efficiently.

## What is the human approach?

The program includes regular conversations with your NCP, who works with your doctor. You are able to have private conversations with your NCP through video, voice, and messaging to talk about any symptoms you may be experiencing, monitor your progress, and help manage your care plan.

## Why Octave's Clinical Insights Program?

As with all chronic diseases, most of what you experience when living with MS happens outside of your doctor's office visit. This program provides an opportunity to receive support and ask experts questions between office visits. You will be able to record what you are feeling when it's happening, and your care team will receive a thorough report in advance of your office visit to improve shared decision-making.

We are currently enrolling patients with Medicare and other health plans that cover this benefit. Your doctor's referral is required. Let Octave's Clinical Insights Program be your partner to support you as you manage your MS.

---

Contact your doctor to see if Octave's Clinical Insights Program is right for you.

## How does Octave work with my clinic?

Your doctor has partnered with Octave's Clinical Insights Program to extend care support beyond the clinic. Through convenient virtual appointments, your NCP will work with you and your doctor to understand and monitor your specific treatment plan and help address new symptoms or concerns with you as they arise.

## What will this cost me?

The program is currently available to patients on Medicare and other health plans that cover the benefit. Contact us at [OctaveCares@Octavebio.com](mailto:OctaveCares@Octavebio.com) to learn more about insurance coverage.
